(PHP/MYSQL)

Backend Developer (m/f/i)

Zenguard is a software company for security- and privacy-software. As part of Kape Technologies Plc. we develop under the brands CyberGhost and Zenmate. Our flag ship product CyberGhost VPN is one of the leading VPN services worldwide because we combine the newest in security technology with usability for our customers. Our development team near Aachen is still keeping a certain startup feeling alive and work with the ideal to make the world a bit safer every day.

To expand and support our development team we are looking for a PHP developer. Your work will focus on:

- Maintaining and further development of our current payment logic
- Creating a new version of our payment API
- Integration of new payment providers
- Integration of new affiliate systems

What we expect:

- More than 5 years of experience in Backend and PHP software development
- Bachelor's degree in Computer Science, Engineering or similar qualifications
- Good proficiency in MySQL
- Knowledge of one of the following frameworks: Zend1, Laravel, Phalcon
- Fluent in English, optional Romanian or German
- Enthusiastic to work in an international company

Nice to have:

- Experience with payment providers as well as affiliation systems
- Experience with AWS and EC2/RDS
- Knowledge of GIT, Kubernetes or Docker

What we offer:

We do not only offer the IT-typical working conditions like flextime, homeoffice, gym, fruit basket and free drinks (including coffee). Instead we offer you the chance to be part of a friendly, highly motivated, agile team with flat hierarchies where you can make your ideas come true.

Help us make the internet a bit safer.
